WBS Title: Vacuum Pumping System

Job Number: 2201

Job Title: Vacuum Pumping System

Job Manager: Bill Blanchard

The proposed design consists of a high vacuum system which is manually operated and includes an isolation valve, a vertical pumpduct on a lower P12 port cover and one 1500 l/s TMP. The TMP will be backed by an existing booster mechanical pump system. The system will also contain one unshielded RGA and one ion gauge with and a valved access port for initially roughing down the vacuum vessel.

Estimate based on prior experience on similar systems (e.g., NSTX), adjusted for the simplicity of this system. Input fro experienced engineers/personnel familar with specific parts of this scope was used for estimates. Includes design activities, some P&ID drawings, weld drawings, fab drawings, calculations, two reviews (PDR & FDR), oversight and purchasing of components. The system should have an approximate pumping speed of 700 l/s for attaining 4e-7 Torr or less after the vacuum vessel has been baked out and the

NCSX June 2007 ETC TABLE IV - Uncertainty of Estimate and Residual Risk Assessment

WBS Number: 22

WBS Title: Torus Vacuum Pumping Systems

Job Number: 2201

Job Title: Vacuum Pumping Systems

Job Manager: Bill Blanchard

Uncertainty of the Estimate

	High	Medium	<u>Low</u>	Uncertainty Range (%)	Comments/Other Considerations
Design Maturity			X	450// 050/	There have been no design reviews therefore the design is not fixed.
Design Complexity			x	-15%/+25%	Anticipated to only require standard components

Other Comments:

Note: High/Medium/Low uncertainty assessment from Job Manager. Uncertainty range based on AACEI recommended practice 18R-97 as amended for NCSX.

Residual Impacts					Cost I	mpact	Schedule	Impact	
Job	Risk Description	Likelihood of Occurring	Mitigation Plan	Basis of estimate	Low	High	Low	High	

NONE

Notes:

- [1] Low cost and schedule impacts are considered the minimum (0-percentile) impacts should the event occur.

 High cost and schedule impacts are considered the maximum (100-percentile) impacts should the event occur
- [2] Cost impacts should be entered as man-hours (by demographic) and M&S direct cost under basis of estimate.

 Cost impacts should NOT include standing army costs which are separately calculated from the schedule impact

 Project control is reponsible for quantifying the low and high cost impacts based on the labor hours and M&S identified
- [3] The schedule impacts should be entered as the min and max impacts on the critical path. If there is no critical path impact then the schedule entries should be zero.
- [4] Likelihood of occurrence should be entered consistent with our risk classification methodology, i.e.
- VL= Very Likely (P>80%), L=Likely (80%>P>40%), U=Unlikley (40%>P>10%), VU=Very Unlikely (P<10%), NC=Non-credible (P<1%)
