Subject: RE: Crack Growth Calculation in Shim Welds

Phil has indicated that the minimum weld dimension is 0.44-inch. The calculation in the memo was, in fact, based on a 12mm weld which corresponds to 0.47-inch. Re-running the numbers for a 0.44-inch weld shows a negligible difference in the conclusions presented. If necessary, I can update the memo to reflect this.

Subject: Crack Growth Calculation in Shim Welds

Gents:

Attached is a memo with crack growth calculations summarized for the shim welds based on Kevin's results.
