### NCSX June 2007 ETC TABLE II- Materials and Subcontracts

WBS Number: 15

**WBS Title: Coil Support Structures** 

Job Number: 1550

Job Title: Coil Support Structures Design

Job Manager: Fred Dahlgren

#### Description:

Procurement Strategies: (1) Single procurement with vendor purchasing all hardware (G11/Nuts/Washers/Other Misc Assy Hardware) vs splitting fabrication and assembly hardware & materials. (2) Fabricator and PPPL procures remaining items in two procurements - See Table V.

# NCSX June 2007 ETC TABLE III - Fabrication and Assembly

**WBS Number: 15** 

**WBS Title: Coil Support Structures** 

**Job Number: 1501/1550** 

**Job Title: Coil Support Structures Design** 

Job Manager: Fred Dahlgren

#### **In-house Fabrication and Assembly and Installation**

Description: N/A Worksheets

## NCSX June 2007 ETC TABLE IV - Uncertainty of Estimate and Residual Risk Assessment

WBS Number: 15

**WBS Title: Coil Support Structures** 

Job Number: 1501/1550

**Job Title: Coil Support Structures Design** 

Job Manager: Fred Dahlgren

Uncertainty of the Estimate				
<u> </u>			Uncertainty	
	High Medium	Low	Range (%)	Comments/Other Considerations
Job 1501			-10%/+15%	
Design Maturity	x			Only now approaching PDR stage, however nothing exotic.
Design Complexity		Х		Standardized components.
• , ,				·
Job 1550			-10%/+15%	
Design Maturity	x			Only now approaching PDR stage, however nothing exotic.
Design Complexity		X		Standardized components.
Other Comments:	There is a finite likelihoo	d of mater	rial costs increasing, but alread	dy assumed an escalation of ~5%/year for Inconel, HOWEVER, recent history indicates much higher
	escalation (see Table V)			

Possibility that vendor will not deliver on time, however, significant float (~4 months exist off critical path) - however, could impact half-period and full-period assembly schedule if TF brackets delayed => other vendors could be identified.

Note: High/Medium/Low uncertainty assessment from Job Manager. Uncertainty range based on AACEI recommended practice 18R-97 as amended for NCSX.

Residual Impacts			
<u>Risk</u>	Likelihood of Occurring (%)	Mitigation Strategies	Consequence if Occurs

<u>Cost</u> <u>Schedule</u>

NONE

WBS Number: 15

#### ADDENDUM

#### MACHINING COST DIFFERENTIAL 316L VS. INCONEL 625

Total hours machining for 316L = 2832 hrs. x 3 = 8496 hrs (Per E.Perry estimate Inconel requires 3x machine time). For \$92.00 shop rate, increase total cost by \$521,088.00 This has not been included in the above estimates. If we include this delta:

TOTAL COST: \$ 1,958,980.00

#### COST DIFFERENTIAL USING INCONEL 600/601

Note, to reduce machining & Material cost Inconel 600 is a more economical candidate material for low relative permeability. (A286, Aluminum, & Stellalloy castings are also being considered). Material removal rates for 600/601 are comparable to machining 316/316L.

If Inconel 601 is used, the original estimate will be reduced by the cost differential between 625 and 601 which averages ~10% less or -52Ks. The 50% material allowance is reduced by -26Ks and the scrap value is assumed comparably less ( $\sim$  10KS). If we include these deltas: -78Ks +10Ks = -68Ks net savings Inconel 625  $\sim$  Inconel 600.

SUB-TOTAL COST: \$ 1,214,694.80 - 68,000 = 1,146,694.80 + 50% matLallowance on 18,489 lbs, Inconel 601,

18,489 x 22.50 x 0.5 = \$208,001.25 Less scrap value \$ 7.50/lb | 18,489 x 7.50 x 0.5 = - 69,333.75 JOB TOTAL COST \$ 1,310,362.30

#### COST DIFFERENTIAL - MARKET CONSIDERATIONS

Do to the volatility in the metals market for Ni, Cr, Mo, it is difficult to estimate the cost of materials for next fiscal year. Vendors are only quoting prices with ARO surcharges, but a conservative extrapolation of current material cost inflation would suggest an additional 10% will be likely by FY'08. In anticipation of these increases an additional 41.6KS will be used for this estimate

TOTAL COST: \$ 1,351,962.25

WBS Number: 15
