## NCSX June 2007 ETC TABLE IV - Uncertainty of Estimate and Residual Risk Assessment

WBS Number: 31 WBS Title: Magnetic Diagnostic Systems Job Number: 3101 Job Title: Magnetic Diagnostic Systems Job Manager: Brent Stratton

## Uncertainty of the Estimate

<u></u>	High	Medium	Low	Uncertainty Range (%)	Comments/Other Considerations					
Design Maturity	X	Medium	<u></u>	-5%/+10%	Exception is Rogowski => Medium - design not finalized					
Design Complexity			х	-5%/+10%	Exception is Rogowski => Medium - design not finalized					

## Note: High/Medium/Low uncertainty assessment from Job Manager. Uncertainty range based on AACEI recommended practice 18R-97 as amended for NCSX.

Residual Impact	<u>s</u>		Likeliheed of					Cost Impact Schedule Impact				
Job	<b>Risk Description</b>		Likelihood of Occurring	Mitigation Plan	Basis of estimate	Low	High	Low	High			
High temperatur	e Rogowski Loop damaged	5%	т	riple redundancy	3 Installed - only one required.	+\$0K	+\$0K	+0.00	+0.00			
during installation resulting in loss of toroidal current measurement capability												

## Notes:

[1] Low cost and schedule impacts are considered the minimum (0-percentile) impacts should the event occur. High cost and schedule impacts are considered the maximum (100-percentile) impacts should the event occur

[2] Cost impacts should be entered as man-hours (by demographic) and M&S direct cost under basis of estimate. Cost impacts should NOT include standing army costs which are separately calculated from the schedule impact Project control is reponsible for quantifying the low and high cost impacts based on the labor hours and M&S identified

[3] The schedule impacts should be entered as the min and max impacts on the critical path. If there is no critical path impact then the schedule entries should be zero.

[4] Likelihood of occurrence should be entered consistent with our risk classification methodology, i.e. VL= Very Likely (P>80%), L=Likely (80%>P>40%), U=Unlikley (40%>P>10%), VU=Very Unlikely (P<10%), NC=Non-credible (P<1%)</p>
