NCGX RFD	Number: NCSX-RFD-12-00	1	RFD Description: VSA Tube Clip Thickness		
Initiator:		_	Organization: Major Tool		
List of Impacted E SE120-005	Oocuments:				
Cost Impact: (If n	one, so state)				
Schedule Impact: (If none, so state) None					
Impact on Interfaces with Other WBS Elements/Items: (If none, so state) None					
Full Description of the Deviation Requested: (Use continuation pages, e-mails, letter, sketches, etc. as needed and include amplifying information as appropriate to support deviation request.) JUSTIFICATION: Please look at drawing SE120-005, sheet 2, zone E2. Detail 39 (Tube Clip) is dimensioned as 28 ga and references a tolerance of (.020010). The parts list on sheet 1 specifies material grade UNS NO6625. Product Specification NCSX CSPEC-121-02-03 3.3.2.1 requires sheet, strip, and plate to conform to ASTM B443. ASTM B443 does not provide a thickness tolerance for plate less than 0.018-0.025" within the specification. With this in mind, we are moving forward with the plan of using material in the range of 0.010-0.020" for the Tube Clips.					
DEVIATION REQUEST: Change SE120-005, sheet 2, zone E2 detail 39 (Tube Clip) thickness tolerance to .008"025"

RLM Recommended Disposition:						
☐ Approve ☐ Do Not Approve (If recommendation is to approve, ECP will be assigned)						
Approve Do Not Approve (ii recommendation is to approve, ECF win be assigned)						
Additional remarks:						
The drawing calls out 28 gauge material for the tube clip, nominally 0.015 inches thick, but						
includes anything in the tolerance range of 0.01 to 0.02 as acceptable. The Vacuum Vessel						
specification calls out ASTM B443 for sheet metal which does not cover gauge under 0.018						
so, although the specification overlaps the acceptable thicknesss, it does not cover 28 gauge.						
The use of any gauge in the range of 0.01 to 0.02 will be acceptable to the Laboratory						
provided it is Inconel 625 alloy, and is found to perform adequately by the vendor.
